Background of OpenChain

Founder: David Marr from Qualcomm and other key community figures.

October

Linux Foundation announced OpenChain Workgroup & launched public wiki.

2015

2016

October

Formally launched at Open Source Summit Europe.

Platinum Members: Adobe, ARM, Cisco, Harman, HPE, Qualcomm, Siemens, Wind River.

- Released 2 ISO standards (ISO 5230, 18974).
- Scaled to global community & industry initiative.
- Established 25-member governance board.
- Adoption by 100+ companies worldwide.
- Grew strategic global partner ecosystem.

2025

2026

Welcome new board member: Renesas

What Is OpenChain

Vision

Our vision is a **supply chain** where open source is delivered with trusted and consistent process management information.

Mission

Our mission is to make that happen.

OpenChain Community

Addressing US Executive Order NIST/CISA

SBOM Requirements

OpenChain ISO/IEC 5230 and ISO/IEC 18974 require the use of SBOMs.

Flexibility & Compliance

They are flexible enough to meet any specific requirements the US develops around SBOM use, structure or format.

Addressing CRA

Early Adoption

OpenChain ISO/IEC 5230 and ISO/IEC 18974 asked for record-keeping before Cyber Resiliency Act (CRA) made it into a requirement.

Verification Mandates

Companies are required to create and archive verification materials around open source license compliance and security assurance.

What Is OpenChain

ISO/IEC 5230 (License Compliance)

Not about process ***content***

ISO/IEC 18974 (Security Assurance)

OpenChain ISO 5230 Status

Current status of the ISO 5230 standard revision.

First, as per ISO organization guidelines, each standard must be renewed every five years. Five years have passed since ISO 5230:2020, so the standard has been officially renewed (without any change).

Second, over the past three years, we made some smaller modifications ([Latest version is 3.0](#)), In our Q2 board meeting, we decided to formally submit these changes to the ISO organization. However, we want to retain the original designation 5230 for the standard and apply a revision label only if necessary.

We help organizations adopt ISO 5230 and ISO 18974

Adopt the global standard for open source license and security compliance. Get started with our comprehensive resources today.
